Exempt Wells – Trends??

- Exempt wells are a fact of life – they have a time and a place
- Exempt wells used to evade public water supply and water rights are a problem
- 75-80% of all subdivision lots use exempt wells for the past 5 years – almost half are 2 acres or less
- Critical area of concern is public wastewater treatment and individual wells on 1/2 acre lots - this is approximately 1000 lots over the last 5 years
- High well density equals more chance of contamination due to multiple penetrations into aquifer
